
a
Reference construction
Cell identity
Spatial region
Spot mixture
Different targets; no pooled truth
b
Within-object fit
Encoder uses X and E
Reference
K = class count
Labels score the partition
c
Patient-disjoint fit
Source transforms and weights
Target geometry is observed
d
Inspection, not independent truth
Registered image
Measured proteins
No new pathology labels
No invented tissue texture
e
Units of variability
Patient contrasts
1 2 3
Seed variability
Descriptive gate
